Highlights of This Issue 1531

REVIEW

1533

The Role of Autophagy in Cancer: Therapeutic Implications
Zhineng J. Yang, Cheng E. Chee, Shengbing Huang, and Frank A. Sinicrope

1542

Potent, Selective Inhibitors of Fibroblast Growth Factor Receptor Define Fibroblast Growth Factor Dependence in Preclinical Cancer Models

1553

Inhibition of Dynamin by Dynole 34-2 Induces Cell Death following Cytokinesis Failure in Cancer Cells

1563

Linear Chain PEGylated Recombinant Bacillus Thiaminolyticus Thiaminase I Enzyme Has Growth Inhibitory Activity against Lymphoid Leukemia Cell Lines
Abigail Daily, Shuqian Liu, Younsoo Bae, Saloni Bhatnagar, and Jeffrey A. Moscow

1571

Antitumor Actions of Ruthenium(III)-Based Nitric Oxide Scavengers and Nitric Oxide Synthase Inhibitors
Frederick W. Flitney, Rebecca J. Pritchard, Gordon D. Kennovin, Stuart K. Bisland, David G. Hirst, and Simon P. Fricker

1581

Compensatory Pathways Induced by MEK Inhibition Are Effective Drug Targets for Combination Therapy against Castration-Resistant Prostate Cancer
Daniel Gioeli, Winfried Wunderlich, Judith Sebolt-Leopold, Stefan Bekiranov, Julia D. Wulffkule, Emanuel F. Petricoin III, Mark Conaway, and Michael J. Weber

1591

Histone Deacetylase Cytoplasmic Trapping by a Novel Fluorescent HDAC Inhibitor

1600

Long Pentraxin-3 Inhibits FGF8b-Dependent Angiogenesis and Growth of Steroid Hormone-Regulated Tumors
Daria Leali, Patrizia Alessi, Daniela Coltrini, Roberto Ronca, Michela Corsini, Giorgia Nardo, Stefano Indraccolo, and Marco Presta

1611

Transformation-Dependent Silencing of Tumor-Selective Apoptosis-Inducing TRAIL by DNA Hypermethylation Is Antagonized by Decitabine
Per Lund, Irina Kotova, Valérie Kedinger, Harshal Khanwalkar, Emilie Voltz, William C. Hahn, and Hinrich Gronemeyer

1624

Mechanisms of Action of a Dual Cdc7/Cdk9 Kinase Inhibitor against Quiescent and Proliferating CLL Cells
Alessandro Natoni, Laura S. Murillo, Anna E. Kiszczak, Mark A. Catherwood, Alessia Montagnoli, Afshin Samali, Michael O’Dwyer, and Corrado Santocanale

1635

Synthetic Triterpenoid Cyano Enone of Methyl Boswellate Activates Intrinsic, Extrinsic, and Endoplasmic Reticulum Stress Cell Death Pathways in Tumor Cell Lines
Palaniyandi Ravanani, Renata Sano, Priti Talwar, Satoshi Ogawara, Shu-ichi Matsuzawa, Michael Cuddy, Sanjay K. Singh, G.S.R. Subba Rao, Paturu Kondaiah, and John C. Reed

ABOUT THE COVER

Nerve growth factor (NGF) immunostaining of human oral squamous cell carcinoma tissues. The image shows high NGF expression in a representative tissue biopsy from an oral cancer patient. Abnormally high levels of NGF are found to play a cardinal role in oral cancer progression, pain, and cachexia through a proinflammatory mechanism. NGF immunoreactions were visualized with diaminobenzidine chromogen (brown) and counterstained with Mayer's hematoxylin. For details, see article by Ye and colleagues on page 1667.
