O(6)-Methylguanine-DNA Methyltransferase Is a Novel Negative Effector of Invasion in Glioblastoma Multiforme
Manik Chahal, Bassam Abdulkarim, Yaoyan Xu, Marie-Christine Guiot, Jacob C. Easaw, Nicolas Stifani, and Siham Sabri

Humanization of an Anti-CCR4 Antibody That Kills Cutaneous T-Cell Lymphoma Cells and Abrogates Suppression by T-Regulatory Cells
De-Kuan Chang, Jianhua Sui, Shusheng Geng, Asli Muavifak, Mei Bai, Robert C. Fuhlbrigge, Agnes Loo, Anuradha Yammanuru, Luke Hubbard, Jared Sheehan, James J. Campbell, Quan Zhu, Thomas S. Kupper, and Wayne A. Marasco

Perillyl Alcohol for the Treatment of Temozolomide-Resistant Gliomas

Stromal Platelet-Derived Growth Factor Receptor α (PDGFRα) Provides a Therapeutic Target Independent of Tumor Cell PDGFRα Expression in Lung Cancer Xenografts
David E. Gerber, Puja Gupta, Michael T. Dellinger, Jason E. Toombs, Michael Peyton, Inga Duignan, Jennifer Malaby, Timothy Bailey, Colleen Burns, Rolf A. Brekken, and Nick Loizos

Mechanistic Basis for Overcoming Platinum Resistance Using Copper Chelating Agents

8-Amino-Adenosine Activates p53-Independent Cell Death of Metastatic Breast Cancers
Alla Polotskaia, Sandy Hoffman, Nancy L. Krett, Malia Shannugam, Steven T. Rosen, and Jill Bargonetti

Synthetic Lethal Screening with Small-Molecule Inhibitors Provides a Pathway to Rational Combination Therapies for Melanoma
Devin G. Roller, Mark Axelrod, Brian J. Capaldo, Karin Jensen, Aaron Mackey, Michael J. Weber, and Daniel Gioeli

A Locked, Dimeric CXCL12 Variant Effectively Inhibits Pulmonary Metastasis of CXCR4-Expressing Melanoma Cells Due to Enhanced Serum Stability
Tomonori Takekoshi, Joshua J. Ziarek, Brian F. Volkman, and Sam T. Hwang

MOLECULAR MEDICINE IN PRACTICE

Epithelial–Mesenchymal Transition and Stem Cell Markers in Patients with HER2-Positive Metastatic Breast Cancer

SPOTLIGHTS ON CLINICAL RESPONSE

Response to Erlotinib in Patients with EGFR Mutant Advanced Non–Small Cell Lung Cancers with a Squamous or Squamous-like Component
Paul K. Paik, Anna M. Varghese, Camelia S. Sima, Andre L. Moreira, Marc Ladanyi, Mark G. Kris, and Natasha Rekhtman

Targeting the Apoptotic Pathway in Chondrosarcoma Using Recombinant Human Apo2L/TRAIL (Dulanermin), a Dual Proapoptotic Receptor (DR4/DR5) Agonist
Vivek Subbiah, Robert E. Brown, Jamie Buryanek, Jonathan Trent, Avi Ashkenazi, Roy Herbst, and Razelle Kurzrock
ABOUT THE COVER

May-Grünwald-Giemsa staining of IGR-N-91 neuroblastoma cells transduced with a dominant-negative (DN) variant of the catalytic subunit of the human telomerase (hTERT). Despite the use of high dose chemotherapy, stage 4 neuroblastoma patients have a dismal outcome, showing a need of new therapeutic approaches in these patients. A new link between telomerase biology and malignant neuroblast cell fate is discovered. Indeed, DN-hTERT transduction in a stage 4 neuroblastoma cell line promotes a switch from a neuronal to a substrate adherent phenotype and regulates key genes, leading to the loss of the malignant behavior of neuroblasts, thereby sensitizing them to anticancer drugs. Therefore, this finding has important implications in the development of novel strategies for neuroblastoma therapeutic management. For details, see article by Samy and colleagues on page 2384.
