# Highlights of This Issue 1151

## REVIEW

### The Potential Role of miR-451 in Cancer Diagnosis, Prognosis, and Therapy
Xuan Pan, Rui Wang, and Zhao-Xia Wang

### CHEMICAL THERAPEUTICS

#### 1163

**CXCR4-Targeted Therapy Inhibits VEGF Expression and Chondrosarcoma Angiogenesis and Metastasis**
Xiaojuan Sun, Cherie Charbonneau, Lei Wei, Wentian Yang, Qian Chen, and Richard M. Terek

#### 1171

**CRM1 and BRAF Inhibition Synergize and Induce Tumor Regression in BRAF-Mutant Melanoma**

#### 1180

**Identification and Characterization of a Small-Molecule Inhibitor of Wnt Signaling in Glioblastoma Cells**
Alessandro De Robertis, Silvia Valensin, Marco Rossi, Patrizia Tunici, Margherita Verani, Antonella De Rosa, Cinzia Giordano, Maurizio Varrone, Arianna Nencini, Carmela Pratelli, Tiziana Benicchi, Annette Bakker, Jeffrey Hill, Kanda Sangthongpitag, Vishal Pendharkar, Boping Liu, Fui Mee Ng, Siew Wen Then, Shi Jing Tai, Seong-Moon Cheong, Xi He, Andrea Caricasole, and Massimiliano Salerno

## LARGE MOLECULE THERAPEUTICS

### MPT0B098, a Novel Microtubule Inhibitor That Destabilizes the Hypoxia-Inducible Factor-1α mRNA through Decreasing Nuclear-Cytoplasmic Translocation of RNA-Binding Protein HuR
Yun-Ching Cheng, Jing-Ping Liou, Ching-Chuan Kuo, Wen-Yang Lai, Kuang-Hsing Shih, Chi-Yen Chang, Wen-Yu Pan, Joseph T. Tseng, and Jang-Yang Chang

### CHEMICAL THERAPEUTICS

#### 1213

**IGF-1R Targeting Increases the Antitumor Effects of DNA-Damaging Agents in SCLC Model: An Opportunity to Increase the Efficacy of Standard Therapy**
Charles Ferté, Yohann Loriot, Céline Clémençon, Frederic Commor, Andrea Gombos, Jean-Emmanuel Bibault, Ingrid Fumagalli, Saad Hamama, Nathalie Auger, Benoît Lahon, Cyrus Chargari, Julien Calderaro, Jean-Charles Soria, and Eric Deutsch

### LARGE MOLECULE THERAPEUTICS

#### 1223

**Human Anti-Macrophage Migration Inhibitory Factor Antibodies Inhibit Growth of Human Prostate Cancer Cells In Vitro and In Vivo**
Filza Hussain, Michael Freissmuth, Dirk Völkel, Michael Thiele, Patrice Douillard, Gerhard Antoine, Patrick Thurner, Hartmut Ehrlich, Hans-Peter Schwarz, Friedrich Scheiflinger, and Randolf J. Kerschbaumer

#### 1235

**Multivalent Scaffold Proteins as Superagonists of TRAIL Receptor 2-Induced Apoptosis**
Jeffery S. Swers, Luba Grinberg, Lin Wang, Hui Feng, Kristen Lekstrom, Rosa Carrasco, Zhan Xiao, Ivan Inigo, Chang Ching Leow, Herren Wu, David A. Tice, and Manuel Baca

#### 1245

**Fibroblast Growth Factor Receptor 3 Is a Rational Therapeutic Target in Bladder Cancer**
Kilian M. Gust, David J. McConkey, Shannon Awrey, Paul K. Hegarty, Jing Qing, Jolanta Bondaruk, Avi Ashkenazi, Bogdan Czerniak, Colin P. Dinney, and Peter C. Black

ABOUT THE COVER

Hypoxia can drive loss of tumor cell differentiation and elevate metastatic potential in pancreatic cancer. Inhibition of heparanase with PG545 reduced vascular function and increased hypoxia in a GEMM of pancreatic cancer; however, PG545 treatment did not enhance tumor cell EMT. Immunofluorescence was used to show that tumors from PG545-treated animals express elevated levels of membrane-associated β-catenin, a characteristic of epithelial cells. These data are consistent with observed changes in E-cadherin and other EMT-associated proteins and suggest that the proinvasive effects of hypoxia can be abrogated by inhibition of heparanase. For details, see article by Ostapoff and colleagues on page 1190.
