Potentiation of Carboplatin-Mediated DNA Damage by the Mdm2 Modulator Nutlin-3a in a Humanized Orthotopic Breast-To-Lung Metastatic Model
ABOUT THE COVER

The cover image shows the structural model of LMB-T20, a highly potent recombinant immunotoxin consisting of an antimesothelin Fv fused to a portion of *Pseudomonas* exotoxin A. The toxin has a deletion of domain II and six point mutations in domain III that delete or greatly suppress the eight T-cell epitopes. For details, see the article by Mazor and colleagues on page 2789.
