Highlights of This Issue 845

REVIEW
847 PD-L1 Expression as a Predictive Biomarker in Cancer Immunotherapy
Sandip Pravin Patel and Razelle Kurzrock

SMALL MOLECULE THERAPEUTICS
857 Preclinical Pharmacological Evaluation of Letrozole as a Novel Treatment for Gliomas
Nimita Dave, Lionel M.L. Chow, Gary A. Gudelsky, Kathleen LaSance, Xiaoyang Qi, and Pankaj B. Desai

909 IKKβ Regulates VEGF Expression and Is a Potential Therapeutic Target for Ovarian Cancer as an Antiangiogenic Treatment

LARGE MOLECULE THERAPEUTICS
941 New Blocking Antibodies against Novel AGR2–C4.4A Pathway Reduce Growth and Metastasis of Pancreatic Tumors and Increase Survival in Mice
Thiruvengadam Arumugam, Deleng Deng, Laura Bover, Huamin Wang, Craig D. Logsdon, and Vijaya Ramachandran
Tumor Cells Chronically Treated with a Trastuzumab–Maytansinoid Antibody–Drug Conjugate Develop Varied Resistance Mechanisms but Respond to Alternate Treatments

Nonclinical Safety Evaluation of VX15/2503, a Humanized IgG4 Anti-SEMA4D Antibody
John E. Leonard, Terrence L. Fisher, Laurie A. Winter, Chad A. Cornelius, Christine Reilly, Ernest S. Smith, and Maurice Zauderer

A Novel Neutralizing Antibody Targeting Pregnancy-Associated Plasma Protein-A Inhibits Ovarian Cancer Growth and Ascites Accumulation in Patient Mouse Tumorgrafts
Marc A. Becker, Paul Haluska Jr, Laurie K. Bale, Claudia O'Leary, and Cheryl A. Conover

The IGF-Trap: Novel Inhibitor of Carcinoma Growth and Metastasis
Ni Wang, Roni F. Rayes, Seyed Mehdy Elahi, Yifan Lu, Mark A. Hancock, Bernard Massie, Gerald E. Rowe, Hafida Aomari, Sazzad Hossain, Yves Durocher, Maxime Pinard, Sébastien Tabaries, Peter M. Siegel, and Pnina Brodt

Biological and Signal Transduction

Contribution of Hepatic Organic Anion-Transporting Polypeptides to Docetaxel Uptake and Clearance
Hannah H. Lee, Brenda F. Leake, Wendy Teft, Rommel G. Tirona, Richard B. Kim, and Richard H. Ho

Trifluridine Induces p53-Dependent Sustained G2 Phase Arrest with Its Massive Misincorporation into DNA and Few DNA Strand Breaks
Kazuaki Matsuoka, Makoto Iimori, Shinichiro Niimi, Hiroshi Tsukihara, Sugiko Watanabe, Shinichi Kiyonari, Mamoru Kiniwa, Koji Ando, Eriko Tokunaga, Hiroshi Saei, Eiji Oki, Yoshihiko Maehara, and Hiroyuki Kitao

Dual PI3K/mTOR Inhibitors Induce Rapid Overactivation of the MEK/ERK Pathway in Human Pancreatic Cancer Cells through Suppression of mTORC2
Helena P. Soares, Ming Ming, Michelle Mellon, Steven H. Young, Liang Han, James Sinnet-Smith, and Enrique Rozengurt

Targeting Integrin-Linked Kinase Suppresses Invasion and Metastasis through Downregulation of Epithelial-to-Mesenchymal Transition in Renal Cell Carcinoma
Kyung Seok Han, Na Ji, Peter A. Raven, Ladan Fazli, Susan Ettenger, Sung Joon Hong, Martin E. Gleave, and Alan I. So

Targeted Blockade of JAK/STAT3 Signaling Inhibits Ovarian Carcinoma Growth
Galina Gritsinta, Fang Xiao, Shane W. O'Brien, Rashid Gabbason, Marisa A. Maglayt, Ren-Huan Xu, Roshan J. Thapa, Yan Zhou, Emmanuelle Nicolas, Samuel Litwin, Siddharth Balachandran, Luis J. Sigal, Dennis Huszar, and Denise C. Connolly

Biomarker Signatures Correlate with Clinical Outcome in Refractory Metastatic Colorectal Cancer Patients Receiving Bevacizumab and Everolimus
Yingmiao Liu, Mark D. Starr, John C. Brady, Christel Rushing, Anuradha Bulusu, Herbert Pang, Wanda Honeycutt, Anthony Amara, Ivy Alimri, Hope E. Uronis, Herbert I. Hurwitz, and Andrew B. Nixon

Transcriptomic and Protein Expression Analysis Reveals Clinicopathological Significance of Bloom Syndrome Helicase (BLM) in Breast Cancer
Arvind Arora, Tarek M.A. Abdel-Fatah, Devika Agarwal, Rachel Doherty, Paul M. Moseley, Mohammed A. Aleskandary, Andrew R. Green, Graham Ball, Alaa T. Alshareeda, Emad A. Rakha, Stephen Y.T. Chan, Ian O. Ellis, and Srinivasan Madhusudan
ABOUT THE COVER

Deregulation of cell-cycle checkpoints is a feature of many different cancer types. WEE1 kinase plays an important role in the maintenance of these cell-cycle checkpoints by inhibiting cyclin-dependent kinase (CDK) activity. Through siRNA screening, it was found that cancer cells with defects in Fanconi Anemia (FA) and homologous recombination pathways were more sensitive to WEE1 inhibition. The cover image shows that WEE1 inhibition in cells depleted of FA protein FANCM resulted in increased replication stress (pan-nuclear γH2AX staining in green) and premature entry into mitosis (yellow). Phospho-histone H3 staining (red) was used to identify mitotic cells. DNA was counterstained with DAPI (blue). For details, see the article by Aarts and colleagues on page 865.
