Highlights of This Issue 2445

EDITORIAL
2447  Targeting Insulin-Like Growth Factor Signaling: Rational Combination Strategies
David Olmos, Bristi Basu, and Johann S. de Bono

REVIEWS
2450  More than Markers: Biological Significance of Cancer Stem Cell-Defining Molecules
Stephen B. Keysar and Antonio Jimeno
2458  Triethylenetetramine Pharmacology and Its Clinical Applications
Jun Lu

THERAPEUTIC DISCOVERY
2468  Discovery and Characterization of Novel Mutant FLT3 Kinase Inhibitors

PRECLINICAL DEVELOPMENT
2545  The Novel Tryptamine Derivative JNJ-26854165 Induces Wild-Type p53- and E2F1-Mediated Apoptosis in Acute Myeloid and Lymphoid Leukemias
Kensuke Koijima, Jared K. Burks, Janine Arts, and Michael Andreeff

2558  BNP7787-Mediated Modulation of Paclitaxel- and Cisplatin-Induced Aberrant Microtubule Protein Polymerization In vitro
Aulma R. Parker, Pavankumar N. Petluru, Mei Zhen Wu, Min Zhao, Harry Kochat, and Frederic H. Hausheer
Molecular Cancer Therapeutics

2568
Histone Deacetylase Inhibition Attenuates Cell Growth with Associated Telomerase Inhibition in High-Grade Childhood Brain Tumor Cells
Ruman Rahman, Teresa Osteso-Ibanez, Robert A. Hirst, Jane Levesley, John-Paul Kilday, Siobhan Quinn, Andrew Peet, Chris O'Callaghan, Beth Coyle, and Richard G. Grundy

2582
A Combination of DR5 Agonistic Monoclonal Antibody with Gemcitabine Targets Pancreatic Cancer Stem Cells and Results in Long-term Disease Control in Human Pancreatic Cancer Model

2593
Combination of Two Insulin-Like Growth Factor-I Receptor Inhibitory Antibodies Targeting Distinct Epitopes Leads to an Enhanced Antitumor Response

2605
Urokinase Plasminogen Activator Receptor and/or Matrix Metalloproteinase-9 Inhibition Induces Apoptosis Signaling through Lipid Rafts in Glioblastoma Xenograft Cells
Chandramu Chetty, Sajani S. Lakka, Praveen Bhoopathi, Christopher S. Gondi, Krishna Kumar Veeravalli, Daniel Fassett, Jeffrey D. Klopfenstein, Dzung H. Dinh, Meena Gujrati, and Jasti S. Rao

2618
MOLECULAR MEDICINE IN PRACTICE
The Novel Hsp90 Inhibitor NXD30001 Induces Tumor Regression in a Genetically Engineered Mouse Model of Glioblastoma Multiforme
Haihao Zhu, Steve Woolfenden, Roderick T. Bronson, Zahara M. Jaffer, Sofia Barluenga, Nicolas Winssinger, Allan E. Rubenstein, Ruihong Chen, and Al Charest

2627
Molecular Therapy Targeting Sonic Hedgehog and Hepatocyte Growth Factor Signaling in a Mouse Model of Medulloblastoma
Valerie Coon, Tamara Laukert, Carolyn A. Pedone, John Laterra, K. Jin Kim, and Daniel W. Fults

2637
CORRECTION
Correction: ErbB-Inhibitory Protein: A Modified Ectodomain of Epidermal Growth Factor Receptor Synergizes with Dasatinib to Inhibit Growth of Breast Cancer Cells

ABOUT THE COVER
A new nanoweb-like drug delivery system integrating cationic liposomes that encapsulated photosensitizer and filamentous M13 phages that were genetically engineered to display anionic peptides on side walls was developed. Morphological evolution of the phage-liposome complexes was studied, and their chemical and biological properties were evaluated for possible application in drug delivery. The study highlights the ability of the phage-liposome nanowebs to serve as efficient carriers to transport photosensitizer to cancer cells. For details, see article by Kalarical Janardhanan and colleagues on page 2524.
