Figure S4. DLK1\(^+\) HCC cells exhibited chemoresistance to chemotherapeutics. The expression level of DLK1 mRNA was measured by real-time PCR after treatment with epirubicin, cisplatin, and 5-FU on Huh-7 (A and C) and Hep3B (B and D) cells. E. Detection of percentage of DLK1+ HepG2 cells by flow cytometry after treatment with epirubicin. These experiments was performed 3 times independently. **indicated that \( P \) value is less than 0.01 as compared to control.
