Supplemental figure legends

Supplemental Figure 1.

Supplemental Figure 2.

A, control GFP antibody induced no remarkable alterations of cell growth, while monoclonal anti-FGFR2IIIc antibody significantly suppressed cell growth in FGFR2IIIc-overexpressing DLD-1 cells (*P < 0.05 vs. parental and mock cells). B, as compared with negative siRNA-transfected cells, transfection with each type of siRNA targeting FGFR2IIIc suppressed LoVo cell growth (*P < 0.05).
