Supplementary Figure 6: (A) A panel of cells (LNCaP, VCaP, 22Rv1, PC3, DU145 and RWPE-1) were treated with the indicated concentrations of mahanine for 3 days. MTT assay was conducted to assess cell viability. The viability of control cells was set at 100%. Columns, mean of three independent experiments with quadruplicate samples; bars, SEM. (B) LNCaP and 22Rv1 cells were treated with mahanine (10μM) for 1-3 days. Cell viability was measured by the MTT assay. The viability of control cells was set at 100%. Columns, mean of three independent experiments with quadruplicate samples; bars, SEM.
