Supplementary Figure S5. p53 depletion accelerates 8N accumulation caused by KW-2450 in colon cancer cells. HCT116 p53+/+ and HCT116 p53−/− cells were treated with KW-2450 (0.5 or 1.0 µM) or DMSO for 48 hours. Each cell cycle histogram represents KW-2450-treated sample (black) and the DMSO-treated control sample (gray).
