ABOUT THE COVER

A novel *TRIM* family member *TRIM59* has proto-oncogenic activity in a transgenic mouse prostate cancer modeling test. Restricted *TRIM59* gene expression in the mouse prostate using a prostate tissue-specific gene (*PSP94*) revealed the full potential for tumorigenesis and developed poorly differentiated cancer of the prostate and comedocarcinoma, which had features of neurocarcinoma (small cell carcinoma) and central necrosis. The *PSP94-TRIM59* mice coincided with the upregulation of genes specific to the Ras signaling pathway and bridging genes for SV40Tag-mediated oncogenesis. For details, see the article by Valiyeva and colleagues on page 1229.
