ABOUT THE COVER

Overlay of the structures of SCH772984 (orange) and VIX-11e (green) revealed that upon binding of SCH772984 to ERK2, Tyr34 undergoes a rotation in the poly-Gly-rich loop creating a new binding pocket for SCH772984. This unique binding mode by SCH772984 is not observed when VIX-11e binds to ERK2. For details, see the article by Jha, Morris, and colleagues beginning on page 548.
