## ABOUT THE COVER

The BCL-2/ $X_L$  pro-survival proteins compromise the effectiveness of cancer therapies. Here, Zoeller and colleagues provide *in vivo* evidence that neutralization of BCL-2/ $X_L$  via navitoclax/ABT-263 enhances the cytotoxic effectiveness of the HER2-targeted antibody-drug conjugate T-DM1. To assess the pathological responses associated with combined treatments, the authors performed specialized histological staining. The cover represents microscopic analysis of a Masson's trichrome stained patient-derived xenograft treated with T-DM1 and navitoclax/ABT-263, and demonstrates substantial elimination of the tumor cells (red) and the emergence of a reactive stroma (blue).
