TABLE OF CONTENTS

LARGE MOLECULE THERAPEUTICS

96  Selective Tumor Cell Apoptosis and Tumor Regression in CDH17-Positive Colorectal Cancer Models using BI 905711, a Novel Liver-Sparing TRAILR2 Agonist
Juan Manuel García-Martínez, Shirley Wang, Cordula Weishaupl, Andreas Wernitznig, Paolo Chetta, Catarina Pinto, Jason Ho, Darrin Dutcher, Philip N. Gorman, Rachel Kroe-Barrett, Joerg Rinnenthal, Craig Giragossian, Maria Antonietta Impagnatiello, Iluigi Tirapu, Frank Hilberg, Norbert Kraut, Mark Pearson, and Klaus Peter Kuenkele

109  TriTACs, a Novel Class of T-Cell-Engaging Protein Constructs Designed for the Treatment of Solid Tumors

121  Restoration of T-cell Effector Function, Depletion of Tregs, and Direct Killing of Tumor Cells: The Multiple Mechanisms of Action of a-TIGIT Antagonist Antibodies

COMPANION DIAGNOSTIC, PHARMACOGENOMIC, AND CANCER BIOMARKERS

132  Circulating Tumor Cells and Biomarker Modulation with Olaratumab Monotherapy Followed by Olaratumab plus Doxorubicin: Phase Ib Study in Patients with Soft-Tissue Sarcoma

142  HLA Polymorphisms Are Associated with Treatment-Free Remission Following Discontinuation of Tyrosine Kinase Inhibitors in Chronic Myeloid Leukemia
Hiroshi Ureshino, Takero Shindo, Hidenori Tanaka, Hiro Saji, and Shinya Kimura

CANCER BIOLOGY AND TRANSLATIONAL STUDIES

150  Heat Shock Protein-90 Inhibition Alters Activation of Pancreatic Stellate Cells and Enhances the Efficacy of PD-1 Blockade in Pancreatic Cancer
Yuchen Zhang, Michael B. Ware, Mohammad Y. Zaidi, Amanda N. Ruggieri, Brian M. Olson, Hannah Komar, Matthew R. Farren, Ganji Purnachandra Nagaraju, Chao Zhang, Zhengjia Chen, Juan M. Sarmiento, Rafi Ahmed, Shishir K. Maithel, Bassel F. El-Rayes, and Gregory B. Lesinski

161  PLK1 and NOTCH Positively Correlate in Melanoma and Their Combined Inhibition Results in Synergistic Modulations of Key Melanoma Pathways
Shengqin Su, Gagan Chhabra, Mary A. Ndiaye, Chandra K. Singh, Ting Ye, Wei Huang, Colin N. Dewey, Vijayasardhuri Setaluri, and Nihal Ahmed

173  Recombinant Orthopoxvirus Primes Colon Cancer for Antitumor and Antiviral Immunity
Sang-In Kim, Anthony K. Park, Shiyambu Chaurasiya, Seonah Kang, Jianming Lu, Annie Yang, Venkatesh Sivanandan, Zifang Zhang, Yanghee Woo, Saul J. Priceman, Yuman Fong, and Susanne G. Warner

183  The Landscape of Glycogen Synthase Kinase-3 Beta Genomic Alterations in Cancer
Brittany A. Borden, Yasmine Baca, Joanne Xiu, Fabio Tavora, Ira Winer, Benjamin A. Weinberg, Ari M. Vanderwalde, Sourat Darabi, W. Michael Korn, Andrew P. Mazar, Francis J. Giles, Lorin Crawford, Howard Safran, Wafik S. El-Deiry, and Benedicto A. Carneiro

191  IOX1 Suppresses Wnt Target Gene Transcription and Colorectal Cancer Tumorigenesis through Inhibition of KDM3 Histone Demethylases
Rosalie G. Hoyle, Huiqun Wang, Yana Cen, Yan Zhang, and Jiong Li

MODELS AND TECHNOLOGIES

203  Antibody Co-Administration Can Improve Systemic and Local Distribution of Antibody–Drug Conjugates to Increase In Vivo Efficacy
Jose F. Ponte, Leanne Lanieri, Eshta Khera, Rassol Laleau, Olga Ab, Christopher Esplin, Neeraj Kohli, Bahar Matin, Yulius Setiady, Michael L. Miller, Thomas A. Keating, Ravi Chari, Jan Pinkas, Richard Gregory, and Greg M. Thurber

In this issue, Su, Chhabra, and colleagues demonstrate that PLK1, a mitotic regulator, and NOTCH1, a protein involved in cell fate determination, are positively correlated in melanoma and associated with patient survival. Further, combined inhibition of PLK1 and NOTCH1 was found to result in synergistic anti-proliferative effects. The cover image represents a tissue core from an in-house human melanoma tissue microarray containing multiple cases of melanomas and benign nevi. The cores were stained for S100 (green), PLK1 (red), NOTCH1 (orange), and DAPI (blue), followed by a multispectral quantitative fluorescence imaging analysis using Vectra scanner coupled with Nuance and InForm software. Read the full article on page 161.
