**About the Cover**

In this issue of *Molecular Cancer Therapeutics*, Morris and colleagues disclose a novel fluorine-containing cytidine analog, F-aza-T-dCyd. F-aza-T-dCyd produced complete regressions in the HL-60 model pictured, as well as in xenografts of bladder and colon cancer. Their disclosure supports the continued development of F-aza-T-dCyd as a new therapeutic in a category that has seen five FDA approvals. Read the full manuscript on page 625.
