

Supplementary figure 2: DN-p85 PI3K reduces the activity of GSK3 β and spheroid invasion but not viability. **A.** Infection with adenovirus for DN-p85 PI3K increases the expression of the p85 subunit in 1205Lu cells (red) Magnification X 40. **B.** Infection of DN-p85 PI3K reduces downstream phospho-GSK3 β activity. **C.** DN-p85 PI3K reduces the ability of 1205Lu spheroid cells to invade. **D.** DN-p85 PI3K does not effect cell viability. Magnification A: X 40. C-D: X10
