

Supplementary Table 2. IGF-1 Induced Changes in Cell Cycle Parameters and Apoptosis Markers in Serum-Starved, Low Adherence BxPC-3 or MiaPaCa2 Cell Cultures.

	BxPC-3 cells		MiaPaCa2 cells	
	IGF-1		IGF-1	
	-	+	-	+
Subpopulation of cells				
G1 phase	39.4%	58.2%	82%	66.9%
G2M phase	11.8%	12.1%	3.1%	2.9%
SubG1 phase	34.3%	18%	8.8%	8.7%
BrdU positive	0.1%	1.4%	2.9%	18.9%
Caspase-3 negative	25.9%	68.6%	87.8%	90.1%
Caspase-3 positive	39.6%	13.2%	3.4%	1.3%
BxPC-3 and MiaPaCa2 cells were incubated in serum-free media in low-adherence culture plates with or without 200nM IGF-1 for 24h. The percent cells in each subpopulation were extracted from FACSCANS.
