

Supplementary Figure 1 Legend

Supplementary Figure 1 GI50 values were determined by the SRB assay in UOK257-FLCN⁻ and UOK257-FLCN⁺ cells in response to exposure of mithramycin alone and mithramycin in combination of 1nM rapamycin for 72 hours. The unpaired t-test analysis (two tailed, GraphPad PRISM™) was performed between the mean of GI50 ($n \geq 4$) in each treatment for UOK257-FLCN⁻ and UOK257-FLCN⁺.
