

Supplementary Figure 1. (for publication only) Gene expression levels of EMT-TFs (*TWIST1*, *SNAIL1*, *ZEB1*, and *TG2*) in the tested cell lines (HMLE, HMLE-TWIST, MCF-7, BT-474, SKBR-3, MDA-MB-231). The *GAPDH* gene was used to normalize gene expression levels, and the relative expression of each gene was calculated using the equation $2^{-\Delta Ct}$, where $\Delta Ct = \text{mean } Ct_{\text{gene}} - Ct_{\text{GAPDH}}$.
