

Supplementary Figure 3

Supplementary Figure 3. *A*, Induction of Bim by saracatinib treatment. SNU216 and NCI-N87 were treated with increasing doses of saracatinib (0.2, 1, 5 μ mol/L) for 48h, after which the extracts were immunoblotted with anti-Bim antibodies. *B*, SNU216 and NCI-N87 cells were transfected with control or Bim-specific siRNA. After 24h, fresh culture medium was added and the cells were treated with DMSO or saracatinib. The cells were harvested for immunoblotting at 48h after treatment.
