

**Suppl. Fig. 1. Profiling of human T, myeloid and NK cells in the spleens of HuNOG-EXL mice (n=3) at day 10 post-inoculation with the A549 cell line (Materials and Methods).** (A) Representative FACS plots are depicted; numbers indicate frequency of the specified populations as a percentage of total live human CD45+ cells. Gates applied for each population have been indicated below the FACS plot. (B) Average frequency of immune populations, expressed as a % of live human CD45+ cells.
